Product Overview

Professional Rod Type Thermostat

This high-precision rod type temperature thermostat is designed for reliable temperature regulation in heating systems and water heaters. It serves as a vital safety device, ensuring consistent temperature maintenance and protecting equipment from overheating. Featuring an adjustable interface and a durable sensing probe, this unit is engineered for easy integration into various temperature-sensitive applications.

Technical Specifications

Electrical Ratings

15 A

Max Current (250V)

10 A

Max Current (400V)

Operating Temperature

20-80°C

Safety Classifications

Safety Device, Overheat Protection

Compatibility

Suitable Applications

- Water Heaters
- Heating Systems
- Temperature-sensitive equipment
