

Roll-to-Roll Gravure Printing Machine

This high-speed gravure printing machine is designed for continuous roll-to-roll printing on flexible substrates. It is equipped with multiple printing stations, adjustable printing pressure and speed, and safety features.

Product Overview

High-Performance Gravure Printing

This high-speed gravure printing machine is expertly engineered for continuous roll-to-roll printing on a diverse range of flexible substrates, including plastic films, paper, and aluminum foil. It features advanced capabilities such as precise tension control, automatic registration, and highly efficient drying systems to ensure superior print quality. Designed for versatility, the system includes multiple printing stations for multi-color applications, making it an ideal solution for packaging, labels, and decorative printing.

Technical Capabilities

Key Systems

- Precise tension control
- Automatic registration
- Efficient drying systems
- Adjustable printing pressure

Printing Process	Roll-to-Roll Gravure
Compatible Substrates	Plastic Films, Paper, Aluminum Foil

Safety & Compliance

Safety Equipment

Emergency Stop Buttons • Safety Guards

Applications

Primary Applications

- Packaging
- Labels
- Decorative Printing
