

Roller Skid for Heavy Equipment

Individual rollers allow for ease of movement of heavy equipment and machinery. Its low profile design ensures stability and reduces the risk of tipping.

Product Overview

Heavy-Duty Machinery Movers

These roller skids provide a professional solution for transporting heavy machinery and equipment across industrial environments. Featuring a robust steel frame and specialized rollers, they ensure stable and efficient movement on both smooth indoor floors and demanding outdoor surfaces. Their modular design allows you to combine multiple units to move larger equipment, providing a scalable solution for your specific logistical needs.

Technical Specifications

Durability Profile

- Non-damaging to indoor floor surfaces
- High-wear resistance for outdoor operation
- Robust heavy-duty steel frame
- Low-profile design for stability

Surface Compatibility

Indoor Smooth Floors, Outdoor Surfaces

Operational Mechanism

Individual rollers for smooth transport with modular capability for scaling load capacity.
