

Roof Ventilator for Air Circulation

This roof ventilator is designed for efficient air circulation. It is constructed from durable plastic and suitable for both industrial and residential buildings.

Product Overview

High-Efficiency Roof Ventilation Solution

This roof ventilator is expertly engineered to provide superior air circulation for both industrial and residential environments. Constructed from durable, high-quality plastic, it features a distinctive layered design that ensures both aerodynamic efficiency and robust weather resistance. Its versatile circular construction makes it an ideal choice for a wide variety of roofing applications requiring reliable air exchange.

Technical Specifications

Material	Durable Plastic
Color Profile	Blue, Red, White
Structural Design	Circular Layered Construction

Application

Recommended Use

- Industrial Buildings
- Residential Buildings
