Overview

High-Efficiency Rotary Disc Mower

This series of rotary disc mowers is engineered for versatile agricultural harvesting, including alfalfa, ryegrass, and oat grass. Designed for durability and performance, the mower features a specialized cutter arbor and dual-spring suspension that allows it to adapt seamlessly to uneven or concave-convex terrain without damaging the ground. With built-in safety mechanisms that protect the machine upon impact, it ensures reliable operation even in challenging field conditions.

Key Features

Operational Advantages

- Non-wrapping cutting action for heavy crops
- Quick-lift system for transport without hitch adjustment
- Impact-resistant design with movable mowing plate
- Superior efficiency compared to reciprocating mowers

Suitable Crops

Alfalfa, Ryegrass, Oat Grass, Native Grass, Corn Stalks

Technical Specifications

Performance Metrics

10 Km/h

Max Working Speed

760 r/min

Max PTO Speed
