

Rotary Hand Pump for Fluid Transfer

This rotary hand pump is a manually operated positive displacement pump for fluid transfer. It is suitable for pumping water, oil, and other non-corrosive liquids in agricultural, industrial, and marine settings.

Product Overview

High-Efficiency Rotary Fluid Transfer

The YL-7 series rotary hand pump is a manually operated positive displacement device engineered for reliable fluid movement in industrial, agricultural, and marine environments. Featuring a durable rotary mechanism and a user-friendly hand lever, it provides efficient transfer of water, oil, and non-corrosive liquids. Its robust design is complemented by a corrosion-resistant coating for increased longevity and improved visibility during operation.

Technical Details

Model Series	YL-7
Operation Type	Manual rotary hand lever
Mechanism Type	Positive displacement

Features

Fluid Compatibility

- Water
- Oil
- Non-corrosive liquids

Key Features

Corrosion Resistant • High Visibility Coating • Easy Maintenance

Industry Applications	Agricultural, Industrial, Marine
-----------------------	----------------------------------
