

Rotary Indexing Table

Rotary indexing tables are designed for machining large workpieces. They feature high precision indexing and robust construction, compatible with various CNC machine tools.

Overview

Precision Rotary Indexing Table

This industrial-grade rotary indexing table is engineered for high-precision machining of large workpieces. It features a robust construction compatible with a wide range of CNC machine tools, ensuring reliability in heavy-duty applications. Equipped with advanced hydraulic or pneumatic clamping systems, it guarantees secure workpiece holding and accurate positioning for demanding manufacturing environments.

Technical Features

Application Suitability

Heavy-duty • CNC Machining • High Precision

Indexing Performance

1 High

Precision Level

Clamping System

Hydraulic, Pneumatic

Mounting Interface

Multiple T-slots
