

# Rotary Rubber Cutting Machine

This rotating-disc type cutting machine is designed for processing natural, synthetic, and reclaimed rubber. It cuts rubber blocks into smaller pieces like slices, granules, and bars.

## ADDITIONAL IMAGES

## Overview

Key components including the cutting guide plate, worktable, and hydraulic control box.

## Industrial Rubber Cutting Solution

This rotating-disc cutting machine is engineered for the efficient processing of natural, compound, reclaimed, and synthetic rubber. Utilizing a robust hydraulic system, it precisely transforms large rubber blocks into smaller, uniform slices, granules, or bars. Designed for industrial-scale operations, the machine combines high-speed performance with reliable, low-friction operation to enhance productivity in rubber manufacturing facilities.

## Technical Specifications

The horizontal hydraulic design utilizes self-lubricating parts to ensure reduced friction and extended service life.

### Key Performance Metrics

**50 r/min**

Rotational Speed

**5 MPa**

Working Pressure

**6.2 kW**

Total Power

### Model Specifications

Feature	WQJ-1000	WQJ-1300
Blade Diameter	1000mm	1300mm
Production Capacity	2 t/h	3 t/h

## Capabilities

RAW MATERIAL • PRODUCTS

We not only have professional products but also have an excellent effect

#### Raw Material

#### Products

The machine is highly versatile, capable of processing various raw rubber forms into finished products.

### Output Forms

- Blocks
- Slices
- Granules
- Bars

### Processable Materials

Natural Rubber, Compound Rubber, Reclaimed Rubber, Synthetic Rubber
