

Rotary Steel Wire Brush for Power Tools

This circular wire brush is designed for power tools. It features densely packed steel wires for effective surface preparation, rust removal, and cleaning on various materials, including metal, wood, and concrete.

Product Overview

Professional Surface Preparation Tool

This high-performance rotary steel wire brush is engineered for demanding industrial surface preparation and cleaning tasks. The dense steel wire configuration ensures efficient removal of rust, scale, and debris from a variety of substrates including metal, wood, and concrete. Featuring a secure central mounting hub, it is compatible with most standard rotary power tools, offering stability and control during operation.

Technical Specifications

Maximum Speed

12500 RPM

Max Operating Speed

Suitable Materials

Metal, Wood, Concrete

Design and Compatibility

Common Applications

- Surface preparation
- Rust removal
- Cleaning
- Deburring

Mounting Method

Central mounting hub for rotary power tools
