

Rotary Tiller for Soil Preparation

This rotary tiller is designed for efficient soil preparation in agriculture. It effectively breaks up and aerates the soil, creating optimal conditions for planting.

Overview

High-Efficiency Soil Preparation

This rotary tiller is engineered for robust soil management, designed to break up compacted earth and effectively aerate soil in preparation for planting. Its durable construction ensures reliable performance in various field conditions, promoting optimal soil structure for crop development. This implement attaches seamlessly to standard tractors, providing a versatile solution for agricultural soil preparation needs.

Technical Specifications

Rated Power Requirement

40 HP

Minimum Tractor Power

Primary Application	Soil Aeration, Seedbed Preparation, Soil Tilling
Compatibility	Standard 3-point hitch tractor attachment
