Product Overview

Efficient Soil Preparation

This robust rotary tiller is designed for high-performance soil cultivation and seedbed preparation. Featuring a heavy-duty frame and a precision-engineered PTO-driven shaft, it effectively pulverizes and aerates soil to create a fine tilth. With its adjustable working parameters and reliable three-point hitch connection, it offers farmers a versatile solution for optimized crop establishment.

Operational Features

Attachment System	Three-point hitch
Power Source	Tractor PTO
Adjustable Controls	Working Depth, Working Width, Rear Flap

Construction

Build Quality

Heavy-duty frame • Robust construction

Key Components

- Heavy-duty gearbox
- Rotating blades
- Protective shield

Performance

Performance Benefits

- Soil pulverization
- Effective aeration
- Weed control
- Optimized soil mixing
