

Rotating Disc Rubber Cutting Machine

This rotating-disc type cutting machine is designed for processing natural, compound, reclaimed, and synthetic rubber. It cuts rubber blocks into smaller blocks, slices, granules, and bars, and can be used for other materials.

Product Overview

Rotating-Disc Rubber Cutting Machine

This industrial cutting machine is specifically engineered for the precise processing of natural, synthetic, compound, and reclaimed rubber blocks. Its rotating-disc design enables efficient conversion of large rubber bales into blocks, slices, granules, or strips with consistent quality. Built for reliability and durability, the equipment features a hydraulic system that ensures smooth operation, reduces friction in moving parts, and extends service life.

Technical Specifications

Horizontal hydraulic system principle ensures precise, reciprocating cutting motion.

Performance Data

Specification	WQJ-1000	WQJ-1300
Blade Diameter	1000mm	1300mm
Rotational Speed	50r/min	50r/min
Power	4+2.2kw	4+2.2kw
Working Pressure	5Mpa	5Mpa
Production Capacity	2t/h	3t/h

Drive System Hydraulic system with reciprocating worktable motion

Cutting Mechanism Rotating-disc blade

Operational Features

Detailed view of the cutting guide, worktable, and control interface.

Supported Materials Natural Rubber, Synthetic Rubber, Compound Rubber, Reclaimed Rubber

Output Forms Blocks, Slices, Granules, Bars
