

# Rotating Disc Rubber Cutting Machine

This rotating-disc type cutting machine is designed for processing natural, compound, reclaimed, and synthetic rubber. It cuts rubber blocks into smaller blocks, slices, granules, and bars, and can also process other materials.

## ADDITIONAL IMAGES

## Product Overview

### Rotating-Disc Rubber Cutting Machine

This advanced rotating-disc cutting machine is specifically designed for the efficient processing of various rubber types, including natural, synthetic, compound, and reclaimed rubber. It enables precise cutting of rubber blocks into smaller segments such as slices, granules, bars, or customized shapes. Built for high performance, the machine utilizes a hydraulic system to provide reliable, consistent, and low-maintenance operation in industrial settings.

## Technical Specifications

### Performance Metrics

**50 r/min**

Blade Speed

**5 Mpa**

Working Pressure

### Model Specifications

Feature	WQJ-1000	WQJ-1300
Blade Diameter	1000mm	1300mm
Power Rating	4+2.2kw	4+2.2kw
Capacity	2t/h	3t/h

## Key Features

### Design Advantages

- Rotating-disc blade design for precise cutting
- Hydraulic-controlled worktable for uniform operation
- Self-lubricating components to minimize friction and wear
- Easy operation with minimal manual intervention required

### Compatible Materials

Natural Rubber, Synthetic Rubber, Compound Rubber, Reclaimed Rubber
