

Rotating Shaft Oil Seal

Oil seals prevent the leakage of lubricants around rotating shafts. These seals have a metal outer ring and an elastomeric sealing lip, which provides a tight and durable barrier against fluid loss and contamination.

Product Overview

Rotating Shaft Oil Seal

These rotating shaft oil seals are engineered to effectively prevent the leakage of lubricants while protecting machinery from external contaminants. Featuring a robust metal outer ring combined with a high-performance elastomeric sealing lip, they create a tight, durable barrier. Designed for versatility, these seals are suitable for a wide range of industrial applications and rotating equipment.

Technical Features

Application Suitability

- Rotating shafts
- Industrial machinery
- Lubricant containment
- General industrial use

Design Construction

Metal Outer Ring, Elastomeric Sealing Lip, Leakage Prevention, Contamination Barrier
