Product Overview

Efficient Agricultural Hay Processing

This mini round hay baler is engineered for high-efficiency hay harvesting, designed to create uniform and dense round bales that optimize storage and handling. Built with a robust chassis and durable green metal enclosure, it is suitable for diverse forage crops and medium to large-scale farming operations. Its sophisticated internal mechanism includes rotating discs and a chain system, supported by hydraulics to ensure reliable performance in demanding field conditions.

Performance Highlights

2 pcs

Heavy-Duty Tires

Technical Features

Design & Construction

- Robust green metal protective enclosure
- Integrated chain compression mechanism
- Hydraulic powered compression and wrapping system
- High-maneuverability wheel-mounted chassis

Safety & Compliance

Safety Features

Protective Shields, Warning Labels, Safety Decals
