

Round Metal File

This round file, also known as a rat-tail file, is used for enlarging holes and smoothing curved surfaces. Its tapered end allows it to fit into various sized openings.

Product Overview

Professional Grade Round File

The round file, also known as a rat-tail file, is a high-quality hand tool designed for precision material removal. It features a cylindrical, tapered shape that is ideal for enlarging holes, deburring edges, and smoothing curved surfaces. This versatile tool is an essential component for professional metalworking, woodworking, and jewelry making tasks.

Technical Specifications

Model Identifier	1368, R.10
Tool Shape	Round / Rat-tail

Applications

Primary Functions

- Enlarging holes
- Smoothing curved surfaces
- Deburring edges
- Precision shaping and finishing

Industries	Metalworking, Woodworking, Jewelry Making
