

Round Metal File

The round metal file is used for enlarging holes or smoothing curved surfaces. It has a cylindrical shape with a tapered end and cutting teeth.

Product Overview

Professional Grade Round File

This round file, frequently referred to as a rat-tail file, is an essential hand tool designed for the precision shaping of curved surfaces and the enlargement of existing holes. Engineered with a tapered cylindrical body covered in effective cutting teeth, it provides consistent material removal performance. It is an ideal instrument for demanding tasks in both metalworking and woodworking environments.

Technical Specifications

Common Applications

- Enlarging holes
- Smoothing curved surfaces
- Metalworking
- Woodworking

Shape	Round / Rat-tail
Model Identifier	1368
Grade/Class	N.10
Key Features	Tapered Design, Cylindrical, Textured Grip
