

# Round Metal File

Precision-engineered for shaping and smoothing curved surfaces, internal contours, and holes in various materials. Its high-carbon steel construction ensures durability and efficient material removal.

## Product Overview

### Precision Round Metal File

This precision-engineered round file is specifically designed for shaping and smoothing curved surfaces, internal contours, and holes across a variety of materials. Constructed from high-carbon steel, it ensures durability and long-lasting performance for demanding tasks. The ergonomic handle design provides a comfortable and secure grip, significantly reducing user fatigue during extended periods of operation.

## Technical Specifications

### Design Features

- Round profile for efficient material removal
- Ergonomic handle for secure grip
- High-carbon steel construction
- Designed for precision finishing
