

Rubber Bale Cutter

This rotating-disc type cutting machine is designed for natural, compound, reclaimed, and synthetic rubber. It cuts rubber blocks into smaller blocks, slices, granules, and bars, and can also process other materials.

Overview

Rotating-disc cutting machine designed for rubber processing.

Professional Rubber Bale Cutting Solution

This rotating-disc type cutting machine is engineered for the efficient processing of natural, compound, reclaimed, and synthetic rubber. Designed for industrial-grade performance, it enables the precise reduction of rubber bales into smaller, manageable blocks, slices, granules, or bars. The machine features a robust hydraulic system and self-lubricating components to ensure consistent output, reduced friction, and an extended service life.

Technical Specifications

Components include cutting guide plate, worktable, and hydraulic control box.

Performance Metrics

50 r/min

Blade Rotational Speed

5 Mpa

Working Pressure

Model Comparison Table

Specification	WQJ-1000	WQJ-1300
Blade Diameter	1000mm	1300mm
Production Capacity	2t/h	3t/h
Power	4+2.2kw	4+2.2kw

Applications

Machine suitable for various rubber and plastic processing applications.

Output Forms

- Blocks
- Slices
- Granules
- Bars

Suitable Materials

Natural Rubber, Compound Rubber, Reclaimed Rubber, Synthetic Rubber, Plastic Films

Features

Key Features

Rotating-disc cutting • Hydraulic control system • Self-lubricating parts • Easy operation • Low manual input
