

Rubber Block Cutting Machine with Rotary Disc

This rotating-disc type cutting machine is designed for processing natural, synthetic, and reclaimed rubber. It cuts rubber blocks into various shapes such as slices, granules, and bars, and can also process other materials.

Overview

Horizontal hydraulic cutting system with rotating-disc blade.

Versatile Rubber Cutting Solution

This rotating-disc cutting machine is designed for efficient processing of natural, synthetic, compound, and reclaimed rubber. Its robust design allows for versatile material reduction, enabling rubber blocks to be cut into smaller blocks, slices, granules, or bars. Engineered for high productivity, it is a reliable addition to rubber processing facilities.

Technical Specifications

Key Performance Metrics

50 r/min

Rotational Speed

5 Mpa

Working Pressure

6.2 kw

Total Power

Model Specifications

Feature	WQJ-1000	WQJ-1300
Blade Diameter	1000mm	1300mm
Production Capacity	2t/h	3t/h

Features

DETAILED • STRUCTURE

Appears In The Detail Contributes To Extraordinary Quality

Main structural components including cutting guide plate and feed mechanism.

Output Forms

- Blocks
- Slices
- Granules
- Bars

Supported Materials

Natural Rubber, Synthetic Rubber, Compound Rubber, Reclaimed Rubber
