

Rubber Compounding Extruder for Seal Production

This rubber compounding extruder is designed for seal production. It ensures precise material flow and efficient mixing, ideal for producing high-quality rubber compounds.

Product Overview

High-Performance Seal Compounding Extruder

This industrial-grade rubber compounding extruder is specifically engineered for the precise production of rubber seals. Featuring a robust construction with a heavy-duty frame, it is built for durability and efficient material mixing. The unit includes a sophisticated extrusion head and flanged sections, allowing for seamless integration into modern manufacturing lines through comprehensive hydraulic and electrical interfaces.

Technical Features

Design & Construction

- Heavy-duty green-painted frame
- Yellow perforated safety enclosure
- High-precision extrusion head
- Integrated flanged sections

Industry Applications

Rubber Processing, Seal Manufacturing, Industrial Compounding

Integration

System Integration

Hydraulic Interface • Electrical Interface
