

Rubber Conveyor Belt Vulcanizing Machine

This conveyor belt vulcanizing machine utilizes precision digital control for uniform and accurate vulcanization. It offers uniform pressure and is designed for easy operation with a lightweight construction.

Overview

Industrial Vulcanizing Solution

This rubber conveyor belt vulcanizing machine is engineered for the efficient splicing and repair of industrial rubber conveyor belts. Featuring robust construction and precise temperature control, the system ensures consistent, high-quality vulcanization for demanding environments. Designed for reliability in sectors such as mining, quarrying, and logistics, it offers adjustable pressure settings and durable heating elements for extended service life.

Technical Specifications

Key Features

- Adjustable pressure settings
- Uniform heat distribution
- Durable heating elements
- Compact design for easy transport and setup
- Electric high voltage generator

Suitable Industries

Mining • Quarrying • Logistics • Manufacturing • Rubber Processing

Certifications

CE, ISO 9001:2008
