

Rubber Kneader for Compound Mixing

This rubber kneader is designed for efficient mixing and kneading of rubber compounds. It features a heavy-duty construction with a powerful drive system, ensuring consistent and reliable performance.

Product Overview

High-Efficiency Rubber Kneading Solution

This robust rubber kneader is designed for the efficient mixing and kneading of various rubber compounds. It features heavy-duty construction with a powerful drive system to ensure consistent, reliable performance in demanding processing environments. Equipped with precision-engineered mixing chambers and rotors, this machine provides optimized material blending for high-quality production results.

Technical Features

Key Components

- Precision-engineered mixing chamber
- High-performance mixing rotors
- Hydraulic ram for controlled material compression
- Integrated cooling system
- User-friendly control panel

Operational Capabilities

Consistent Mixing, Material Compression, Temperature Regulation, High Productivity

Performance Metrics

Performance Highlights

1 User-friendly

Control System

1 Hydraulic

Ram Type
