

Rubber Mallet with Composite Handle

This rubber mallet is designed with a black rubber head and a composite handle. It provides a softer impact than a metal hammer, making it suitable for tasks where marring or damage to the work surface should be avoided.

Product Overview

Professional Grade Rubber Mallet

This rubber mallet is engineered to provide a controlled, softer impact compared to traditional metal hammers, making it an essential tool for delicate assembly tasks. The durable composite handle offers a comfortable grip while ensuring structural integrity during heavy use. It is specifically designed to prevent marring or surface damage, making it ideal for precision work in woodworking, automotive repair, and metalworking environments.

Technical Specifications

Head Material	Rubber
Handle Material	Composite
Color	Black Head, Yellow Handle, Blue Handle

Application

Suitable Applications

- Woodworking
- Metalworking
- Automotive Repair
- Surface-sensitive assembly

Key Benefits

Non-Marring • Softer Impact • Surface Protection
