

Rubber Material Applicator Machine

This machine is designed for the precise application of materials in rubber manufacturing processes. It features a robust frame and dual application heads for consistent and accurate application.

Product Overview

Precision Rubber Material Application

This specialized applicator machine is engineered for the precise gluing of rubberized cord onto cord drums. It is built to handle various drum perimeters, layer configurations, and material widths, ensuring versatility in rubber processing. Designed for industrial environments, the system features automation control to maximize efficiency and support long-term operational reliability.

Technical Capabilities

Control System

Automation Control

Primary Application

Gluing rubberized cord into cord drums

Process Flexibility

Variable Perimeter, Multi-layer Support, Adjustable Width

Design Features

Construction Highlights

- Robust frame construction
- Dual application heads
- Vertical adjustment rods
- Integrated material feed system
