

Rust-Proofing Rubberized Undercoat for Metal Protection

This rubberized undercoat provides a durable, rust-proof protective layer. It is designed to shield metal surfaces from moisture and corrosion, extending the lifespan of treated components.

Product Overview

Professional Grade Rubberized Undercoating

This rubberized undercoating provides a highly durable, flexible barrier designed to shield metal surfaces from moisture, corrosion, and environmental stressors. Ideal for automotive underbodies and structural metal components, it effectively seals against salt and chemicals while resisting chipping, cracking, and peeling. The formula offers superior adhesion to ensure long-term protection in harsh conditions.

Technical Details

Net Weight	453 g
Model Identifier	SP100-1

Key Features

Performance Highlights

16 oz
Net Weight

Resistance Properties	Rust-proof, Salt Resistant, Corrosion Resistant, Chip Resistant
-----------------------	---

Application Benefits

Surface Benefits

- Creates a flexible rubberized barrier
- Prevents rust through effective sealing
- Resists peeling and cracking
- Excellent adhesion to metal surfaces
