

RV-2 Viscosity Cup

The RV-2 Viscosity Cup is a precision instrument for measuring liquid viscosity. It features a calibrated orifice and stainless steel construction, suitable for quality control and research applications.

Product Overview

Precision Flow Measurement

The RV-2 Viscosity Cup is a high-precision instrument engineered for the reliable measurement of liquid viscosity. Constructed from durable stainless steel, it offers excellent chemical resistance and longevity in demanding laboratory and industrial environments. Its calibrated orifice design ensures consistent flow-time readings, making it an essential tool for quality control, research, and process monitoring.

Construction & Design

Material	Stainless Steel
Key Features	Chemical Resistant, Calibrated Orifice, Easy to Clean, Precision Engineered

Applications

Suitable Applications

- Quality Control
- Research and Development
- Industrial Process Monitoring
