

SAFAT Building Project

The SAFAT building was a foreign contract project. It was a complete set of foreign aid project construction task.

Project Overview

SAFAT Building Project

The SAFAT Building project represents a significant achievement in modern construction, showcasing advanced architectural design and structural integrity. This development integrates complex engineering solutions, including specialized curtain wall systems and high-grade structural steel frameworks. Designed for versatility, the facility supports a wide range of commercial and industrial applications.

Scope of Services

Civil Engineering, Public Construction, Industrial Construction, Infrastructure Projects

Technical Capabilities

Contracting Models

- Construction Total Package
- EPC Contract

Specialized Engineering Expertise

Architectural Decoration • Mechanical & Electrical Installation • Steel Structure Engineering • Building Intelligence • Curtain Wall Design • Municipal Utilities • Fire Control Facilities • Foundation Engineering

Global Recognition

Industry Standing

225 Rank

World's Largest Contractors Ranking

International Reach

Operations across 30+ countries and regions
