

SAFAT Commercial Building Project

The project involves the construction of the SAFAT building, a multi-story commercial complex. It showcases modern architectural design and structural engineering.

Project Overview

Commercial Construction Expertise

This project represents a comprehensive solution for large-scale commercial building development. With advanced capabilities in civil, industrial, and public infrastructure, the construction approach integrates specialized engineering disciplines including mechanical, electrical, and structural systems. The project is delivered through flexible contract models, including EPC and total package construction, ensuring high standards of architectural and technical execution.

Project Capabilities

Specialized Contracting Services

Service Area	Qualification Level
Housing Construction	Level 1
Architectural Decoration	Special Class B
Foundation Engineering	Grade B
Municipal Utilities	Grade B
Fire Control Facilities	Grade B

Engineering Disciplines

Mechanical & Electrical Installation, Steel Structure Engineering, Building Intelligence, Curtain Wall Design & Construction

Contract & Scope

Project Scope

- Civil Engineering
- Public Construction Projects
- Industrial Construction
- Infrastructure Projects

Available Contract Models

Construction Total Package • EPC Contract

Industry Recognition

Global Standing

225 Rank
