

# Sand and Gravel Dredger Pump

This pump is designed for dredging and transferring abrasive materials like sand and gravel. It is capable of handling capacities up to 22,000 gpm and heads up to 240 ft.

## Product Overview

### Industrial Slurry Handling Solution

This cantilevered, horizontal centrifugal slurry pump is engineered for the high-volume transfer of highly abrasive, high-concentration materials. Designed for reliability in the most demanding environments, it supports multi-stage series installation to meet complex head requirements. It serves as a robust solution for critical operations within the metallurgy, mining, coal, and power sectors.

## Technical Features

### Pump Size

**10 inch**

Discharge Diameter

### Operational Capabilities

- Handles highly abrasive slurries
- Handles high-concentration slurries
- Multi-stage series installation compatible

### Pump Configuration

Cantilevered horizontal centrifugal

## Certifications & Compliance

### Quality Standards

CE, ISO 9001, UKAS, SGS

## Applications

### Target Industries

Metallurgy • Mining • Coal • Power Generation • Dredging • Aggregate Processing
