

Sand Processing Equipment

This industrial equipment is designed for sand processing in mining operations. It features a robust construction with a central cylindrical component, supported by a complex framework of beams, platforms, and support structures.

Product Overview

High-Efficiency Sand Making Technology

This next-generation vertical-shaft impact crusher is engineered for modern industrial scale, focusing on energy efficiency and environmental sustainability. It is specifically designed to produce high-quality machine-made sand through optimized structural and functional advancements. The system ensures low operational costs while maintaining high productivity across a variety of demanding material processing applications.

Performance Metrics

Capacity

100 TPH

Minimum Capacity

583 TPH

Maximum Capacity

Technical Specifications

Maximum Input Size	50 mm
--------------------	-------

Material Compatibility

Suitable Materials	Granite, Quartz, Basalt, Pebble, Limestone, Dolomite
--------------------	--
