

Sanding Belts for Electric Tools

High-performance sanding belt designed for electric tools and suitable for a variety of materials, including wood, metal, and plastics. The belt features a robust joint for smooth operation and is available in various grits to meet different sanding requirements.

Product Overview

Professional Sanding Belts

These high-performance sanding belts are engineered for demanding electric tool applications, offering reliable sanding and finishing capabilities. Designed with durable construction, they deliver consistent results across various substrates including wood, metal, and plastics. The integrated robust joint design minimizes vibration during operation, ensuring a smooth, high-quality finish for every project.

Technical Features

Construction Benefits

- Robust joint design for smooth operation
- Reduced vibration during use
- High-durability material composition

Usage Types

Professional Use • DIY Use

Compatible Materials

Wood, Metal, Plastics
