

Sandstone Washing Machine

The sandstone washing machine efficiently cleans and separates rock flour and clay from sand and stones. Its robust design and reliable transmission gear ensure optimal cleaning and dehydration.

Product Overview

High-Efficiency Sandstone Cleaning

This bucket-type washing apparatus is designed to efficiently clean and separate rock flour and clay from sand and stone materials. Featuring an original sealing structure and reliable transmission gear, it achieves superior cleaning and dehydration. Its robust design is optimized for continuous large-scale industrial operations.

Technical Specifications

Equipment Type	Bucket-type washing apparatus
Cleaning Method	Impellor-driven agitation and friction grinding

Key Features

Performance Advantages	High cleaning efficiency, Large handling capacity, Low power consumption, Durable sealing structure
Reliability Design	Transmission gear is separated from water and sand to minimize failure rates and extend operational life.

Application Areas

Typical Industries

- Construction
- Sand and stone plants
- Hydropower stations
- Concrete dams
