

Satellite Communication Network

This is a satellite communication network. The network incorporates PSTN, data networks, network control terminals (NCT), and network management systems (NMS).

System Overview

Satellite Communication Network Solution

The RT10000 communication network provides a robust infrastructure for satellite-based connectivity, linking remote terminal stations to centralized gateway stations. Supporting integrated voice, fax, and data transmission, the system architecture facilitates seamless communication with PSTN and standard data networks. This comprehensive solution is managed through dedicated control and management terminals to ensure stable and reliable operations for complex professional environments.

BBU-8 Channel Capacity

8 channels

System Components

Gateway Infrastructure

- Antenna and RF components
- Network Control Terminal (NCT)
- Network Management System (NMS)
- PSTN interface
- Data network interface

Supported Remote Stations

RT10000 BBU-4, RT10000 BBU-8

Communication Capabilities

Service Support

Voice • Fax • Dial-up Modem • Data Network
