

Satellite Communications Terminal

The satellite communications terminal is engineered for dependable data transmission. It features LED indicators for monitoring power, reset, LAN, POTS, and TV connectivity.

Product Overview

Satellite Connectivity Solution

The S4100 is a high-performance satellite communications terminal engineered for reliable data transmission in demanding environments. Designed for versatility, this terminal facilitates robust connectivity across remote or mobile locations. It is an ideal solution for professionals requiring stable network access via advanced satellite infrastructure.

Technical Specifications

Supported Interfaces

- LAN
- POTS
- TV

System Status Indicators

- Power
- Reset
- LAN
- POTS
- TV Connectivity

Network Standards

DVB-RCS, SatNet

Operational Features

Primary Applications

Remote Sites • Mobile Environments • Robust Communication
