

Scaffolding Ledger with Octagonal Locking Mechanism

This scaffolding ledger provides secure and reliable horizontal support. Its tubular construction includes specialized end connectors and an octagonal locking mechanism for enhanced stability.

Product Overview

Octagonlock Ledger Overview

The Octagonlock Ledger is a specialized scaffolding component engineered for secure and reliable horizontal support. Featuring a robust tubular construction, it incorporates a unique octagonal locking mechanism that ensures exceptional stability and enhanced load-bearing capacity. This component is essential for maintaining structural integrity in scaffolding systems, providing a safe and dependable working platform for high-altitude construction and maintenance tasks.

Technical Specifications

Component Type	Scaffolding Ledger
Locking Mechanism	Octagonal Locking System
Construction	Tubular

Applications

Primary Applications	Construction, Maintenance, High-altitude Work
----------------------	---
