

# Scale Traps

Scale traps, also known as distributor baskets, capture scale from installation and service, preventing bed contamination. They enhance bed intersurface contact of gas or liquid and prevent surface coking.

## ADDITIONAL IMAGES

## Product Overview

### Industrial Distributor Baskets

Scale traps, also known as distributor baskets, are essential components used to trap debris and scale in industrial fluid systems. By preventing bed contamination and avoiding surface coking, these units ensure the longevity and efficiency of downstream equipment. They are expertly engineered to improve the intersurface contact of gases or liquids within critical industrial reactors.

## Technical Dimensions

Basket Diameter	120mm to 200mm
Basket Height	500mm to 900mm
Slot Openings	0.8mm to 1.5mm

## Applications

Common Processes	Hydrogenation Processes, Oil and Gas, Chemical Processing, Water Treatment
------------------	--

## Functional Benefits

### Key Operational Functions

- Trap scale from installation and service
- Prevent bed contamination
- Increase gas or liquid intersurface contact
- Avoid surface coking
