

Scalloped Bearing with Mounting Base

This bearing features a scalloped design for weight reduction and improved lubrication. It is mounted on a metallic base, providing a stable platform for integration into mechanical systems.

Product Overview

High-Performance Scalloped Bearing

This scalloped bearing with a mounting base is engineered for integration into mechanical systems to significantly reduce friction and support rotating components. The unique scalloped design is optimized for weight reduction and potentially improved lubrication during operation. Mounted on a durable metallic base, it ensures a stable and secure fit for demanding machinery applications.

Technical Identification

Model Number

NF15A

Design & Construction

Bearing Design	Scalloped design for weight reduction and lubrication efficiency
Mounting Base	Metallic base for stable machinery integration
Component Color	White

Application

Primary Function

- Friction reduction
- Support for rotating components
- Mechanical system stabilization

Key Features

Mechanical Support, Low Friction, Industrial Grade
