

Scrap Metal Recycling Equipment for Copper Wire

Machinery designed for recycling scrap metal, particularly copper wiring. It efficiently processes various gauges and forms of copper, including insulated and bare strands.

Product Overview

High-Efficiency Copper Recycling Solution

This scrap metal recycling equipment is specifically engineered for the efficient processing of copper wire, enabling high-yield material recovery. Designed for industrial metalworking environments, it streamlines the handling of various wire gauges, from insulated to bare strands. By optimizing the separation and preparation of copper scrap, this machinery helps businesses maximize the value of their recycled resources.

Material Compatibility

Processed Materials

Copper Wire, Insulated Wire, Bare Copper Strands, Mixed Scrap Metal

Operational Capabilities

Key Features

- Handles various wire gauges
- Supports insulated and bare copper processing
- Optimized for material recovery
- Industrial-grade durability
