

Scrap Metal Recycling Equipment

This equipment is designed for processing various types of scrap metal. It aids in material reclamation and waste reduction.

Overview

Industrial Scrap Metal Processing

This specialized equipment is designed for the efficient handling and reclamation of various industrial metallic components. It is capable of processing diverse materials, including copper wiring, tubing, and complex metallic elements salvaged from dismantled machinery. This solution is ideal for recycling facilities looking to streamline their material recovery operations.

Technical Details

Batch Configuration

- 3
- 8

Processing Year

2005

Compatible Materials

Copper Wiring, Tubing, Industrial Machinery Components
