

Screw Conveyor System for Material Handling

This screw conveyor system efficiently moves granular and powdered materials horizontally or at a slight incline. The system utilizes a rotating helical screw blade within a trough, driven by a motor, making it suitable for industries like agriculture, food processing, and construction.

Product Overview

Efficient Material Handling Solution

This screw conveyor system is engineered for the reliable movement of granular and powdered materials, whether horizontally or at a slight incline. Utilizing a helical screw blade rotating within a robust trough or tube, it ensures consistent material flow driven by a high-performance motor. Constructed from durable steel, this system is built to withstand abrasive conditions and heavy-duty loads, making it an ideal choice for demanding industrial environments.

Technical Specifications

Construction Material

Steel

Mechanism

Helical screw blade rotating within a trough or tube

Applications

Target Industries

- Agriculture
- Food Processing
- Construction

Suitable Materials

Grains, Powders, Aggregates
