

Screwdriver Bit Stamping Machine

This screwdriver bit stamping machine is designed for efficient and automated logo application on workpieces. It ensures precise material positioning and operator safety with its robust frame and safety enclosure.

ADDITIONAL IMAGES

Product Overview

Industrial Stamping Precision

This automated screwdriver bit stamping machine is engineered for high-efficiency logo and alphanumeric marking on metallic workpieces. It features a robust industrial-grade frame integrated with a precise hydraulic system to ensure consistent stamping force during mass production. The unit includes automated bit feeding and a programmable control interface to facilitate seamless integration into professional manufacturing environments.

Operational Capabilities

Stamping Features

- Automatic logo stamping
- Alphanumeric character marking
- Symbol and product code application
- Adjustable stamping force
- Automated bit feeding mechanism

Control System

Programmable Control, Digital Display, Hydraulic Force Application

Safety and Design

Design Highlights

- Safety enclosure for operator protection
- Robust frame for industrial stability
- Precision material positioning
- Suitable for various bit sizes and materials
