

# SD16 Earthmoving Bulldozer

The SD16 bulldozer is a robust construction machine designed for earthmoving and heavy-duty applications. It features a powerful engine, a durable undercarriage, and a versatile blade for pushing, leveling, and grading materials.

## Overview

### SD16 Earthmoving Bulldozer

The SD16 is a robust construction machine engineered for demanding earthmoving and heavy-duty applications. Featuring an advanced hydraulic drive system and precise hydraulic control technology, it offers reliable performance combined with flexible operation. This bulldozer is an ideal solution for diverse job sites, including road construction, mining operations, and large-scale land clearing projects.

## Performance

Drive System	Hydraulic drive system
Control Technology	Hydraulic control

## Applications

Suitable Applications	Road Construction, Mining, Land Clearing, Earthmoving
-----------------------	---

## Key Features

### Operator Features

- Comfortable operator cab
- Excellent visibility
- Precise blade control
