

Seal-less Magnetic Drive Centrifugal Pump

This seal-less centrifugal pump is designed for transferring corrosive or high-purity fluids. The magnetic coupling eliminates the need for a direct mechanical connection between the motor and the impeller.

Overview

Seal-less Magnetic Drive Centrifugal Pump

The MD series magnetic drive pump is a high-performance, seal-less centrifugal pump engineered for the transfer of corrosive or high-purity fluids. By utilizing a magnetic coupling instead of a direct mechanical connection, this design eliminates the risk of leaks and significantly reduces maintenance requirements. Constructed from corrosion-resistant materials, it offers reliable and efficient operation in demanding industrial environments, featuring a compact footprint and high flow capabilities.

Technical Features

Pump Type	Seal-less Centrifugal Pump
Drive Mechanism	Magnetic Coupling
Key Features	Seal-less, Corrosion-resistant, Leak-free, Compact Design

Operational Safety

Operational Warnings

- Do not run dry (DRY, •bzDL)
