

Seamless Teflon Fusing Belt

This seamless fusing machine belt is made from fine fiberglass and Kevlar, knitted with specialized equipment and coated with PTFE. It overcomes the joint problems of traditional fusing machine belts.

Product Overview

High-Performance Fusing Machine Belts

These Teflon-coated fusing belts are engineered for demanding textile and apparel manufacturing environments. By utilizing high-quality fiberglass and Kevlar substrates, these belts offer superior thermal resistance and non-stick performance. The product range includes advanced seamless designs that eliminate traditional joint-related issues such as ruptures, instability, and tracking deflections.

Technical Specifications

Available Variants

- Seamless Fusing Belt
- 2-Ply Static-Resistant Belt
- Common Seam Joint Belt

Materials

Fiberglass, Kevlar, PTFE Coating

Key Features

Performance Highlights

1 Grade

High Temperature Resistance

1 Grade

Flex Fatigue Resistance

1 Grade

Static Resistance

Core Benefits

Anti-static • Non-stick surface • Prevents deflection • High tensile strength • Durable
