

Seawater Desalination Plant

This desalination plant converts seawater into potable water. The facility features multiple buildings and storage tanks for efficient water purification.

Overview

Industrial Seawater Desalination

This seawater desalination plant is engineered for high-efficiency water purification in coastal environments. Designed to convert raw seawater into potable water, the facility integrates multiple processing stages within a compact, organized industrial layout. It provides a reliable solution for regions requiring large-scale water treatment infrastructure.

Technical Details

Application	Seawater Desalination
Process	Water Purification, Desalination
