Product Overview

Seawater Filtration Unit

This stainless steel filtration unit is designed to protect water pumps and cooling systems by removing sand, stones, and debris from seawater. Constructed from high-quality 304-grade stainless steel, it offers excellent durability for marine environments. The system features an internal steel grid that can be replaced regularly to ensure continuous, reliable performance.

Technical Specifications

Flow Configurations

- Type A: Filtered left and right
- Type B: Filtered up and left

Material Composition

Stainless steel 304

Available Sizes

3/8", 1/2", 3/4", 1", 1-1/4", 1-1/2", 2", 2-1/2", 3", 4"

Operational Features

Maintenance Features

- Replaceable internal steel grid
- Easy access for cleaning
- Removes sediment and debris
