

Secure Access Smart Card

This smart card enables secure access control for various systems. It is designed to enhance the security and efficiency of access management.

Product Overview

High-Security Access Control

The Secure Access Smart Card is designed to provide robust security for enterprise information systems. It supports rigorous security protocols, enabling organizations to define and adjust protection levels based on service criticality and system dependency. This ensures that sensitive information systems maintain compliance and integrity through a standardized protection lifecycle.

Security Lifecycle

Security Protection Workflow

- Identification of information systems and subsystems
- Analysis of service importance and dependency
- Determination of security protection levels
- Adjustment and optimization of security protection

Continuous Assessment Enabled

Yes
