

Segmented Diamond Concrete Grinding Disc

This segmented diamond concrete grinding disc is designed for efficient material removal on concrete surfaces. Its robust steel core features laser-welded diamond segments for durability, while the segmented design facilitates dust extraction and cooling.

Product Overview

Professional Concrete Grinding Solution

This segmented diamond concrete grinding disc is engineered for high-efficiency material removal on concrete surfaces. It features a robust design with double-row diamond segments, consolidated through a high-temperature heat treatment process to ensure maximum durability and longevity. The optimized segmented structure facilitates effective dust extraction and cooling during operation, making it ideal for grinding, leveling, and smoothing tasks.

Technical Specifications

Hole Diameter	22 mm
Segment Type	Double Row

Manufacturing & Quality

Manufacturing Process	High-temperature heat treatment
-----------------------	---------------------------------

Packaging & Logistics

Packaging	Individual color box
-----------	----------------------

Performance Features

Key Features	Aggressive Material Removal, Efficient Dust Extraction, Optimized Cooling, High Durability
--------------	--
