

Self-Aligning Roller Bearing for Industrial Machinery

This high-performance self-aligning roller bearing is designed for demanding industrial applications. It features precision-engineered rollers and raceways to ensure smooth operation under heavy loads and misalignments.

Product Overview

High-Performance Self-Aligning Design

This self-aligning roller bearing is engineered for demanding industrial environments where reliability and precision are critical. Its robust construction effectively manages heavy radial loads and accommodates shaft misalignment, reducing internal stress. Designed to minimize friction and optimize load distribution, this component ensures extended service life and significantly lower maintenance costs for your machinery.

Technical Details

Recommended Applications

- Gearboxes
- Industrial Pumps
- Conveyor Systems
- Heavy Machinery

Quality Certifications

Precision Engineered • Heavy Duty

Model Designation

22310K

Key Capabilities

Self-Aligning, High Load Capacity, Reduced Friction, Industrial Grade
